

2015 NEW LOOP SYSTEM INSTALLED IN THE SANCTUARY

Anyone with a tele coil compatible hearing aid can enjoy Sunday morning sermons without the use of additional equipment. People sitting in the congregation can simply switch their existing hearing aid to the "tele coil" position and they are wired directly into the sound system.

Intelligibility is greatly increased because the distance between the speaker and the listener is bridged.

Background or environmental noise is almost eliminated; there is no echo or distortion produced by the room and sound system. If you do not have a t-coil hearing aid or need help with sound amplification, you are welcome to use one of the three "Loop Listeners" we also purchased. These are small devices worn around the neck that come with headphones. Please ask the ushers if you would like to try one.
